

Installation Requirements

Operating System– Microsoft® Windows XP™ Service Pack 2 , Vista™, Microsoft® 2003 Server, Microsoft® 2008 Server

Database– Microsoft® MSSQL 2005, Microsoft® SQL Express 2005

DMS Look-Up Requirements

eForms Express™ stores all metadata inside its own database. All DMS systems are required to have barcode recognition and database look-up capability. Third party middleware may be used. Software's like NSI Autostore™ (barcode and VB script component required)

ADO Requirements

eForms Express™ uses ADO connection object to connect to third party databases. Either direct connection if allowed or ODBC driver may be required in some cases.

eForms Express™ Annual Maintenance Agreement

eForms Express™ offers yearly maintenance on all software sold. Purchased maintenance Agreement includes:

- 9 to 5 Phone Support
- Patches and Version changes
- Online Knowledge Base

Simplifying your
 Structured Forms

eForms Express™ 3.0 Enterprise

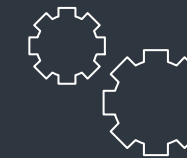

Technology at work

STRUCTURED FORM SOLUTION THAT WORKS FOR YOU

Most organizations are looking into streamlining and automating their paper, no longer wanting to store there important documents into file cabinets fearing of loss due to disaster or human error. With this in mind they might be looking into a Document Management Systems (DMS). DMS will allow them to store and retrieve their valuable documents but there is one glaring part that is not focused on during the selection process, that is Capture. Capture is how you are

going to convert your paper into digital images, index and store into your DMS system. eForms Express™ allows you to do this very simply. eForms Express™ catalogs all of your structured forms at the time of creation. We tag it with a unique bar code that is associated to the index values that were required at the time of creation. This allows the paper to go and do its work, capture a signature or information and then scan and route into your DMS all automatically.

CONNECT IN SECONDS

eForms Express™ 3.0 Enterprise can connect in seconds to any application that is database driven. eForms Express™ Enterprise drag and drop usability will allow the operator to connect and test before going to production.

EFORMS EXPRESS™ 3.0 ENTERPRISE KEY FEATURES

- SERVER BASED FORMS
- UNLIMITED DEPARTMENTS
- MULTIPLE DATABASE CONNECTIONS
- MULTIPLE TABLE CONNECTION
- PRINT OR EMAIL
- SERVER-CLIENT UPDATING
- SINGLE SIGN ON
- MICROSOFT® SQL EXPRESS

flexible solution for your business needs

Database Connection

eForms Express™ 3.0 Enterprise allows you to connect to any database. We use ADO connection technology to connect to your mainline business applications. With our multi-database connection technology we can connect one application to pull some information and at the same time connect to another application database to pull supporting data. All of this data can then be mapped onto the corresponding form.

- ADO Connection
- ODBC Connection
- SA credentials
- Microsoft® Windows™ Authentication
- Trimming and Masking

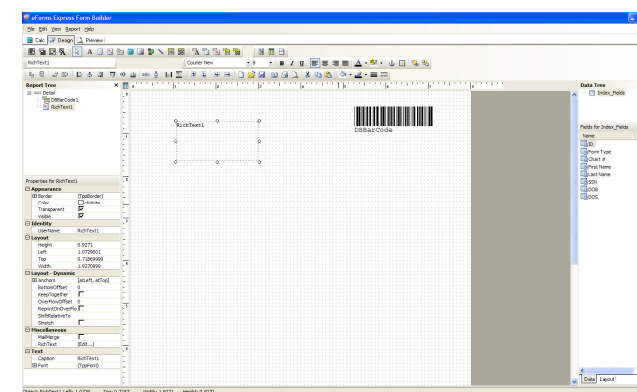

Documents Management Support

eForms Express™ is designed to interface to any Document Management Solutions that will support barcode recognition and database look-up. eForms Express™ will connect to over 125 DMS systems.

TECHNOLOGY THAT PROVIDES A TOTAL END TO END SOLUTION.

Built-In Forms Design Interface

eForms Express™ 3.0 Enterprise comes with a built in forms design tool. Any beginner can design a form with in minutes.

- Rich Text Box
- Picture Import
- PDF 417 Bar-Code Support
- Linier Bar Code Support
- Drag and Drop Data Links
- Intelligent Form Calculations
- Multiple Paper Sizes Supported

UNLIMITED DEPARTMENTS

eForms Express™ 3.0 Enterprise allows you to create unlimited departments. Allowing forms, users and printers to be assigned to a group not an organization.

EASY USER INTERFACE

eForms Express™ comes with a simple and easy to use interface. The user types in the unique value and what forms are required. eForms does the rest.
